

**IN THE ABSTRACT:**

*The Abstract is amended as follows. A clean copy is also attached for the convenience of the Examiner.*

The invention relates to a system for storing and accessing information units. It comprises at least one storage device for storing the information units, at least one presentation device for presenting the information units, and a network connecting the storage device and the presentation device. At least one of the information units is assigned to a physical location. The system further comprises positioning means for determining the physical location of the presentation device, and presentation control means for controlling the presentation of a respective information unit in dependence on the physical location of the presentation device and on the location to which the respective information unit is assigned.
